DOCUMENT INFORMATION

Document	Project Overview, Public Edition
Document Date	November 10, 2026
Classification	Public
Copyright	© 2026 AXY Network. All rights reserved.
Organization	AXY Network
Product	AXY Host
Current Version	1.8.0 (pre-release)
Target Platform	Windows 10 and 11 (Windows-first)
Application Shell	Tauri 2 (uses the Windows WebView2 already installed)
Backend	Rust
Front End	Plain HTML, CSS and JavaScript, no framework
Primary Design	Black and Red
Related Platform	AXY Central. AXY Host accounts are local and not connected to AXY Central.
Project Type	Desktop application for running and managing Minecraft servers on the user's own computer

© 2026 AXY Network. All rights reserved.

1. WHAT AXY HOST IS

AXY Host is a Windows desktop app that lets anyone run Minecraft servers on their own PC. It gives you one clean window to create servers, start and stop them, manage players, install mods, make backups and help friends connect, without needing to touch the command line.

It is built with Tauri and Rust so it stays light on memory, disk and processor. It uses the WebView2 component that Windows already includes, so no browser is bundled with the app.

At a glance	
Version	1.8.0 (pre-release)
Platform	Windows 10 and 11 (Windows is the main target)
Server types	Paper, Purpur, Vanilla, Fabric, Forge, NeoForge
Several servers	Run and manage more than one server at once
Accounts	Local accounts with 24 permission options, for people who share a PC
Mods	Modrinth browser, plus CurseForge with your own API key
Tracking	No analytics or tracking

2. STATUS

AXY Host is in active development and has not had a public release yet. Earlier versions have been tried on a real Windows PC. The newest versions (1.6 to 1.8) have passed an extensive set of automated checks, but still need real-world testing before a wider release. Treat the current build as a preview and use a throwaway server when trying it.

The installer is not yet code-signed, so Windows may show a SmartScreen warning. Signing is planned before release.

3. WHAT YOU CAN DO WITH IT

Create and run servers

- Six server types, with the right Java chosen for each Minecraft version.
- Set seed, world type, difficulty, game mode, player limit, view and simulation distance, structures, hardcore, PVP and the Nether when you create a server.
- Import an existing server folder, or a Modrinth modpack (.mrpack).
- Servers can live in any folder you choose.
- Low resource mode for slower PCs.

Console and files

- Live console with filter, saved commands, history and past logs.
- Built-in file editor: browse, edit, create, delete and drag files in.
- Live RAM and CPU graphs for the app and each server.

© 2026 AXY Network. All rights reserved.

Players

- See health, hunger, inventory, armor, ender chest, play time and statistics.
- Heal, feed, kill, and reset inventory, ender chest, levels, achievements or statistics.
- Manage operators, whitelist and bans.
- A safety copy is always made before any reset.

Mods and plugins

- Browse Modrinth with only the mods that fit your server version and software.
- See what is already installed, with update checks.
- Links to mod pages ask before leaving the app.
- One-click Geyser and Floodgate on Paper and Purpur, for Bedrock players.

Networking

- UPnP port forwarding, public IP lookup and a warning if your connection cannot be forwarded (CGNAT).
- Domain helper that shows the exact DNS records to add, and checks them.
- Dynamic DNS with DuckDNS, Cloudflare or a custom address.

Automation and safety

- Scheduler for restarts, backups, announcements and commands.
- Backups as zip files, with restore, and automatic restart after a crash.
- Discord webhook notifications.
- Maintenance mode: only operators can join, and the server list says so.

Server listing

- Choose a server icon and a two-line description with colors and styles.
- Live preview styled like Minecraft's server list.

4. ACCOUNTS FOR SHARED PCS

If more than one person uses your computer, the owner can create accounts and decide what each person may do. There are 24 permissions covering viewing, starting and stopping, console commands, player actions, file editing, backups, settings, networking, mods, scheduling and administration. Four presets (Viewer, Starter, Operator, Admin) make setup quick, and each person can be limited to specific servers.

Passwords are protected with Argon2id hashing and there is a recovery code. Every action is checked by the app itself, not just hidden in the window, and an activity log records what happened.

Good to know: accounts are local to the computer. They are not connected to AXY Central or any AXY Network account. They act as a lock inside the app and do not protect against someone who can use your Windows account.

5. PRIVACY AND WHAT THE APP CONNECTS TO

AXY Host has no analytics and no tracking. It only contacts the internet to do things you ask for. Links open in your browser only from a short approved list.

Service	Why
Mojang, PaperMC, Purpur, FabricMC, MinecraftForge, NeoForged	Server versions and downloads
Eclipse Adoptium	Java downloads, checked with checksums
Modrinth	Mods, plugins and modpacks
CurseForge	Only if you add your own API key
GeyserMC	Geyser and Floodgate downloads
Public IP lookup and DNS checks	Only when you ask, or for dynamic DNS
DuckDNS, Cloudflare, Discord	Only if you set them up
Item pictures and player heads	Item pictures on by default and can be switched off, player heads off by default
Update check	Checks whether a newer version exists
Your router	Port forwarding on your local network only

Everything is stored on your own PC under `%APPDATA%/axy-host/`. Passwords are stored only as hashes. Note that optional integration secrets (a Discord webhook address, a dynamic DNS token and a CurseForge key) are stored as plain text on your PC, and are hidden from the window after saving.

6. THE MINECRAFT EULA

AXY Host never accepts the Minecraft EULA for you. It asks you to read and tick it yourself before a server can start. Minecraft is a trademark of Mojang and Microsoft, and AXY Host is not affiliated with either.

7. KNOWN LIMITATIONS

- Windows is the main target. The tray icon and start with Windows are Windows only.
- Forge is offered for Minecraft 1.17 and newer. One-click Geyser works on Paper and Purpur only. Quilt modpacks are not supported.
- Port forwarding, live DNS checks, Discord messages and Forge and NeoForge installs have not yet been tested against the real services.
- A changed server description needs a server restart to show in the server list.
- Maintenance mode relies on the whitelist and on operators being set up.
- Hex colors are not offered in the description editor because support varies by server.
- Legal pages are still being reviewed.

8. WHAT IS COMING

Before a public release the plan is to finish real-world testing, sign the installer, complete the legal review, publish builds with checksums, and add a download page. Ideas being considered afterwards:

- Tunnels for people who cannot forward ports
- Velocity proxy support
- A remote web panel with the same permissions
- Signed automatic updates
- CurseForge modpacks and update checks
- Crash report reader, TPS graph and player count history
- Quilt support, Forge for older versions, and per-mod enable and disable

9. PRINCIPLES

- Light on resources: Tauri and Rust instead of a bundled browser.
- Safe by default: a copy is kept before any world reset, import or player wipe.
- Honest about permissions: every action is checked in the backend.
- Respect for Mojang's rules: the EULA is always your choice.
- Only approved websites open from the app, and mod links ask first.

AXY Host is a project by AXY Network.

APPENDIX A – TESTING STATUS

An honest summary of what has and has not been checked.

Area	Status	Notes
Earlier versions (1.2.2 to 1.4.0)	**TRIED ON A REAL PC**	Core server running, Rust rewrite and redesign confirmed working.
Newer features (1.6.0 to 1.8.0)	**AUTOMATED CHECKS ONLY**	45 Rust tests and 137 interface checks passed in a simulated setup.
Windows window, installer, tray icon, start with Windows	**NOT YET TESTED**	—
Real Minecraft servers and real player files	**NOT YET TESTED**	—
Router port forwarding, live DNS checks, Discord messages	**NOT YET TESTED**	—
Forge and NeoForge installs	**NOT YET TESTED**	—
Code signing and release installer	**PLANNED**	Expect a SmartScreen warning until signing is in place.
